Summary

Bilingual CTO (US/French) with 13 years scaling a SaaS platform from early-stage startup through acquisition. Lead distributed engineering teams across continents, architect resilient cloud infrastructure on AWS, and sustain 99.99% uptime while reducing infrastructure costs by 15-20%. Currently driving AI-enabled engineering practices and team upskilling. Combine deep Ruby on Rails expertise (10+ years) with prior Java leadership (10 years) and a foundation in applied computer science. Based in Utah, fluent across US and European tech cultures.

Highlights

- 13 years scaling noCRM.io from early-stage startup through acquisition by Positive Group
- Sustained 99.99% uptime across distributed Rails/AWS infrastructure
- Reduced infrastructure costs 15-20% through architecture optimization
- Led migration from managed PaaS (Engine Yard) to self-managed AWS with full IaC
- Bilingual leadership across US and French engineering cultures
- Independent iOS app developer (App Store published)

Skills

Languages & Frameworks: Ruby on Rails (10+ years), Java (10 years), JavaScript, Backbone.js, SQL, Shell

Cloud Platforms: AWS (EC2, S3, RDS, CloudWatch, IAM, SSM), Cloud Infrastructure Architecture, High Availability & Scalability, Disaster Recovery Planning

DevOps & Infrastructure as Code: OpenTofu / Terraform (IaC), CI/CD Pipelines (GitHub Actions, Capistrano), Infrastructure Automation, Site Reliability Engineering (SRE)

Monitoring & Observability: Prometheus, Grafana, Elasticsearch, Filebeat, Cloud Monitoring & Alerting

Datastores & Performance: SQL, MySQL Optimization, Database Performance Tuning, Cost Optimization

Security & Governance: Security & Compliance, IAM & Access Control, Infrastructure Security Best Practices

Leadership & Strategy: Engineering Team Leadership & Mentoring, Cross-functional Collaboration, Stakeholder Management, Product Roadmapping, AI adoption

Experience

CTO | noCRM by Positive (Paris, France) - Remote from Eden, UT | February 2013 - Present

- **Lead a distributed engineering team of 4 developers across France and the US**, working asynchronously across time zones with strong delivery discipline and operational ownership.
- **Architected and scaled the technology strategy from early-stage startup through acquisition by Positive Group**, evolving the engineering organization over 13 years.
- **Led full migration from managed PaaS (Engine Yard) to self-managed AWS with infrastructure-as-code** (OpenTofu/Terraform), GitHub Actions deployment pipelines, and automated AMI builds.
- **Engineered a reliability-first culture that achieved and sustained 99.99% uptime**, supported by proactive monitoring, structured incident management, and a fully tested Disaster Recovery framework.
- **Optimized infrastructure strategy and resource allocation**, reducing operating costs by 15–20% while strengthening system performance and scalability.
- **Drive organizational adoption of AI-enabled engineering practices:** evaluated leading AI coding tools, selected and rolled out Claude Code across the team, and trained engineers on AI-assisted development workflows including code review and testing.

Experience (continued)

Project Leader | CGG Veritas - Houston, Texas | January 2002 - June 2012

- **Led multi-disciplinary technical projects** in seismic data processing and geophysical software development across international teams.
- **Managed project lifecycles from requirements through delivery**, balancing technical depth with stakeholder coordination.
- **Drove software adoption and training programs** across global departments at one of the world's largest geophysical services companies.
- **Built foundational expertise in large-scale data systems**, scientific computing, and Java enterprise development.

Technical Achievements

- **AWS Migration:** Led multi-year migration from Engine Yard to self-managed AWS with full IaC (OpenTofu), Auto Scaling Groups, automated AML pipelines, and zero-downtime cutover.
- **High Availability:** Architected and operate a 99.99% uptime SaaS platform with multi-AZ design and tested disaster recovery procedures.
- **Cost Optimization:** Reduced infrastructure spend 15-20% through right-sizing, reserved instance strategy, and architecture refactoring while improving performance.
- **Observability Stack:** Built monitoring and alerting infrastructure on Prometheus, Grafana, Elasticsearch, and Filebeat for proactive incident detection.
- **AI Adoption:** Established team-wide AI-assisted development practices, evaluated leading AI coding tools, and selected and rolled out Claude Code with team training on AI-assisted code review and testing workflows.

Side Projects

- **Rewards Card Wallet (iOS)** — Solo-developed loyalty card and Apple Wallet app published on the App Store. End-to-end ownership: iOS development, App Store optimization, marketing site, localization (English/French), and ongoing feature development.

Education

Master equivalent, Computer Science Applied To Geology | University Pierre et Marie Curie, Paris | 2000 - 2001

Master equivalent, Physical and chemical hydrogeology | University Joseph Fourier, Grenoble | 1999 - 2000

Bachelor equivalent, Geology & Geophysics | University of La Rochelle, La Rochelle | 1995 - 1999

Languages

English: Bilingual - Full Professional

French: Native - Bilingual
